DETAILED ACTION

- 1. Applicant's argument on page 9 of the "Response to Office Action Mailed 10/3/2003" is found to be valid.
- 2. Claims 1-15 are presented for examination.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claim 1-2, 4-7, 9-15 are rejected under 35 U.S.C. 102(b) as being anticipated by DeMaster (6,066,181).
- 5. As per claim 1, DeMaster teaches a computer system, comprising:
 A runtime operating environment that comprises a computer processor and an operating system adapted to execute:

A first object code portion containing instructions for eliciting certain actions from a Java Virtual Machine (JVM) associated with any of plurality of operating environments (Figure 1, object 140 and 135);

A second object code portion containing instructions for eliciting certain actions from the operating system associated with the runtime operating environment (Figure 1, object 100); and first and second source code portions, wherein the first object code portion is

derived from the first source code portion, the second object code portion is derived from the second source code portion, and wherein the second source code portion is adapted to derive a third code portion containing instructions for eliciting certain actions from a second operating environment, different from the runtime operating environment (Figure 1, object 128. Object is generated by Java code generator).

- 6. As per claim 6, it is rejected for similar reasons as stated above.
- 7. As per claim 13, it is rejected for similar reasons as stated above.
- 8. As per claim 2, DeMaster teaches the computer system, wherein execution of the instructions contained within the first and second code portions may be initiated by a Java application program acting within the runtime operating environment (e.g. col. 2, lines 34-44).
- 9. As per claim 7, it is rejected for similar reasons as stated above.
- 10. As per claim 4, DeMaster clearly shows the computer system, wherein the second source code portion comprises definitions of native methods of Java AWT Component peer classes written in the C/C++ programming language (e.g. col. 4, lines 1-11).
- 11. As per claim 5, DeMaster teaches the computer system, wherein the second object code portion comprises a host platform interface (HPI) between the AWT component Peer classes and the runtime operating environment (e.g. col. 4, lines 64-67 and col. 5, lines 1-10).
- 12. As per claim 12, it is rejected for similar reasons as stated above.
- 13. As per claim 15, it is rejected for similar reasons as stated above.

Application/Control Number: 09/885,995 Page 4

Art Unit: 2154

14. As per claim 9, DeMaster clearly shows the method, wherein the first code is written in the Java programming language (e.g. Figure 1, object 140).

- 15. As per claim 10, DeMaster shows the method, further comprising defining native methods of Java AWT Component Peer classes in the second code (e.g. col. 2, lines 1-21, AWT is simply one of many classes within Java, the native interface code generator.
- 21. AWT is simply one of many classes within Java, the native interface code generator can generate any code including the AWT in native programming language).
- 16. As per claim 11, it is rejected for similar reasons as stated above.
- 17. As per claim 14, DeMaster shows the computer-readable storage device, wherein the first source code portion comprises definitions of at least some of the Java AWT Component Peer classes (e.g. col. 2, lines 23-33. The Interface Definition Language is used to define different Java classes. AWT is one of many classes that is defined by IDL. Moreover, this claim is rejected for similar reasons as stated in claim 8).

Claim Rejections - 35 USC § 103

- 18. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 19. Claims 3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeMaster in view of in view of Sun Microsystems, Inc. "The AWT Native Interface", Copyright 1999 (hereinafter Sun).

Application/Control Number: 09/885,995

Art Unit: 2154

As per claim 3, DeMaster does not show a system wherein the first source code portion comprises definitions of Java abstract windowing toolkit (AWT) Component Peer classes written in the Java programming language. Sun shows the source code portion, which comprises of definitions of Java AWT (e.g. page 3 and 4, "MyCanvas class" computer code). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine DeMaster with Sun because it would provide for creation of Java AWT Component Peer classes written in Java programming language.

20. As per claim 8, it is rejected for similar reasons as stated above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Farhood Moslehi whose telephone number is 703-305-8646. The examiner can normally be reached on M-F 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on 703-305-8498. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
